

pab0073 Anti-Mouse IgM (mu) antibody

Product specifications

Immunogen IgM(mu)
Form Purified antibodies **Raised in** Goat

Applications Unlabelled antibodies are often used to sensitive ELISA plates or during competition titration. They can be used in immunoprecipitation, where it is better to use unpurified antibodies (globulin fraction). Antibodies are particularly suitable for use in the most sensitive procedures (ELISA, immuno-histochemistry, immuno-cytology and western blot). Their quality is guaranteed because a very stringent purification protocol is followed where non-specific and specific purifications alternate (affinity chromatography). Antibodies undergo a routine inspection of the cross reactions between target species. If necessary, the total elimination of cross-reactions can require an adsorption by affinity chromatography against the antigen whose recognition is not desired.

Working dilutions Coating : 10 to 50 µg/ml

Packaging specifications

Packaging 1 ml
Concentration 1 mg / ml
Appearance Liquid
Constituents PBS, 50% Glycerol
Preservative None
Storage instructions Short term storage : +4°C
 Long term storage : -20°C
Recommendations Product in glycerol, do not freeze

Product type
 Primary antibody
Clonality
 Polyclonal Antibody
