

pab0166 Anti-Mouse IgG (H+L) antibody

Product specifications

Immunogen	IgG(H+L)		
Form	Purified antibodies	Raised in	Sheep
Cross reactions	Do not cross react with human IgG, A, M		
Applications	Unlabelled antibodies are often used to sensitive ELISA plates or during competition titration. They can be used in immunoprecipitation, where it is better to use unpurified antibodies (globulin fraction). Antibodies are particularly suitable for use in the most sensitive procedures (ELISA, immuno-histochemistry, immuno-cytology and western blot). Their quality is guaranteed because a very stringent purification protocol is followed where non-specific and specific purifications alternate (affinity chromatography). Antibodies undergo a routine inspection of the cross reactions between target species. If necessary, the total elimination of cross-reactions can require an adsorption by affinity chromatography against the antigen whose recognition is not desired.		
Working dilutions	Coating : 10 to 50 µg/ml		

Packaging specifications

Packaging	2 ml
Concentration	5 mg / ml
Appearance	Liquid
Constituents	PBS, 50% Glycerol
Preservative	None
Storage instructions	Short term storage : +4°C Long term storage : -20°C
Recommendations	Product in glycerol, do not freeze

Product type

Primary antibody

Clonality

Polyclonal Antibody
